

# Compliance and Security of SCX batteries

.design

The quality and regulatory compliance of our batteries are of greatest importance to us. While developing our products, we scrupulously look for the highest quality components to ensure our users' safety.

- SCX design batteries are class A certified, which means that they have not been recycled and conform to the highest security levels.
- Their lifespan is about 1,000 charging cycles.
- Before being assembled, all SCX batteries are tested on the following criteria:
  - Resistance to air pressure and temperature variations
  - Drop tests (vibration resistance and shock resistance)
  - Short-circuit and overheating

- Our short-circuit chips are of IC5306 quality ensuring a higher level of security:

- After being assembled, each battery is tested several times in our factories.
- All the products in our range are assessed by a certified laboratory and thoroughly observe the European Regulationtoire.
- The Declaration of Compliance as well as all test reports of our products can be provided upon request.
- SCX design products are warrantied for 3 years.
