

V41 - Rotating Car Charger

The rotating car charger combines wireless charging, intelligent operation and premium customization in an innovative car accessory.

To install a smartphone, simply place it in the holder: the side arms close automatically to hold the device securely. To remove the phone, simply touch the release sensor; the arms open automatically, allowing convenient one-handed use while driving.

Its unique 90° rotating design makes it easy to switch between portrait and landscape modes. It is ideal for GPS navigation, hands-free calls and multimedia content.

Compatible with Qi wireless charging up to 15W, it provides fast and reliable charging for a wide range of smartphones. The light-up logo enhances brand visibility both day and night, turning the charger into a premium communication medium.

Everything is included: customization, charging cable and recycled cardboard gift box with magnetic closure.
